SPECIAL SHAPES
Founded in 1885 as a fire brick company, Belden Brick has remained dedicated to constantly improving our basic product. Today, the fourth and fifth generations of Beldens head the company. For more than 130 years, our employees have sought ways to reliably provide customers with the best in brick products. The traits of our company have come to merge with those of our products – solid, stable and reliable.

Our more than 500 skilled employees combine old world craftsmanship and dedication with modern technology to produce what are acknowledged to be the finest architectural brick available. Our ISO 9001 Compliant Quality Management System demonstrates the company’s commitment to quality.

Consider the adjectives used to describe brick structures - solid, durable and classic. Next consider the natural beauty of brick. Manufactured from clay and shale, brick displays tones and textures giving brick structures their unique appeal. Little wonder that brick has been the choice for architects and builders seeking to create buildings that embody both style and strength.

Many people are satisfied with the limited palette available using traditional brick. Others have sought ways to expand the use of this classic building material. Brick shapes and colors are used to design new architecture while maintaining the material’s traditional strengths. Today's leading-edge architects and builders typically turn to The Belden Brick Company’s Special Shapes Department to provide creative forms of brick for their design.
UNLIMITED POSSIBILITIES WITH BELDEN SPECIAL SHAPES

Our special shapes division is prepared to move new brick concepts from your mind to the mason’s hand. Architects and designers need not let their creativity be stifled by existing ideas of how a brick should look. We invite you to explore the artistic impact that special shape brick can have on your design.

Belden Brick special shapes provide unique design elements – corners, angles, curves, slopes as well as other dramatic effects. They continue to be signature pieces of residential and commercial architecture. We can also provide unique colors, making your next building stand out as a one-of-a-kind structure or a complement to companion buildings.

We have created an amazing array of shapes, sizes, colors and textures for projects across the country. The brick you have in mind may already be in our inventory. If not, we are prepared to offer you design and production services customized to your needs.
WE PARTNER WITH YOU IN DESIGN OF SPECIAL SHAPES

You can select from an extensive inventory of standard shape dies and molds for commonly used special shapes. Examples include corners, radials, bullnoses, sloped sills, headers, coping caps and other general shapes. You can also modify those shapes or create entirely new shapes as needed. Please look at our website at www.beldenbrick.com to see our extensive selection.

Soft mud varieties can be mass-produced and fired to look exactly like centuries old hand made brick. When required, skilled artisans at The Belden Brick Company can also hand mold special shapes to create one-of-a-kind designs that may not be available from a typical molding process.

Designing a special shape begins with your drawing. Some basic information, outlined within this Special Shapes Brochure can assist with your project. Please partner with your Belden Brick Distributor to fill out the required information form. This information, will be used to create a CAD drawing submitted for final approval prior to production.

The Belden Brick Company’s Special Shape Division provides customers with an unlimited range of possibilities.
THE ART OF MAKING BRICK

Brick making is as much an art form as a manufacturing process. Our raw materials include Ohio clays and shales that are carefully blended. Extruding this mixture through a die and cutting it to the proper width produces most special shape bricks. Some shapes are made by hand to exact customer specifications. An impressive inventory of dies, templates, mold boxes and other tools used for creating special shapes provide The Belden Brick Company with options for both large scale production runs or one-of-a-kind specialty items.

Once formed into shape the clay is hand set onto kiln cars and taken to dry. Both standard and special shapes go through a critical, slow drying process and are then fired in high temperature kilns at the same time as the field brick to ensure both structural integrity as well as the desired appearance.

We use both state-of-the-art tunnel kilns as well as the old style beehive kilns. Tunnel kilns provide more control for achieving uniform color continuity. Smoke or extra heat can also be added to create flashing, which enhances the brick color. Beehive kilns produce colors not achievable in tunnel kilns and are used when extended flashing is required.

When the firing and cooling process is completed, the brick are inspected, sorted and blended by hand to provide the desired color blend needed for the job site. This saves valuable construction time and ensures a balanced appearance. Shapes are then packaged, numbered and often coded to correlate with specific assembly instructions at the job site.

YOU CAN DESIGN WITH A DIFFERENCE

Many building materials are commodity items. They are, by necessity, the same no matter when or where they are purchased. Architects and builders rely on these commodity items for many parts of their construction projects.

For those elements of the project that need to stand out, that need to embody unique visual or structural characteristics, you require unique products like Belden Brick special shapes. Our special shape brick give form to function, and combine dramatic visual appeal with structural integrity. The unlimited range of sizes, shapes, colors and textures enable you to Design with a Difference.
A brick sculpture is an impressive, enduring way to present logos, murals or emblems. There is no stronger way to integrate these images into the facility itself.

The rich colors and textures of brick impart a warm, human feeling to the highly dimensional images carved in the brick. Sculptures add a distinct touch of lasting beauty and style, and provide immediate visual recognition for the facility.

Belden Brick artisans will work with your original design or execute an existing logo or emblem in brick. Carving the image into the green brick achieves a remarkable level of detail; the brick is then dried and fired. Careful inspection is then performed before being hand-packed for shipment to your site.

Brick sculptures enhance the beauty and individuality of offices, schools, churches, hospitals and corporate facilities. With brick sculpture, designers and architects have the opportunity to transform your logo or emblem into a lasting brick masterpiece.

The ultimate expression of brick is seen in many brick sculptures that have been inspired by architects. These one-of-a-kind sculptures are created by artists and constructed with quality Belden Brick.

470-479 Light Range Norman - Custom Shapes
THE MAKING OF BRICK

Let Belden Brick help your visions become a reality by allowing us to create special shape brick to suit your design needs.

Close-up of a sloped shape being cut, textured and kerfed. Special wires cut the slope, and the sharpened knife is set at the required angle to create the texture required.

What the unfired shapes look like as formed, and a few cut to size, showing kerf marks for eventual breaking after firing.
THE PROCESS

A special bullnose stretcher that was cut from a shape box. Now the face of the shape is being hand-slicked to develop the smooth finish required to match the adjacent field brick.

Hand-drilling “Blind Cores” in the bottom of these shapes to help minimize the chance of problems in drying and firing.

Skillful “touching up” of the hand-slicking process to ensure a quality appearance.

**CUSTOM JACK ARCH**  
A. Dimensions of Masonry Opening  
B. Skew Angle  
C. Thickness of Mortar Joint  
D. Number of Adjacent Vertical Courses  
E. Brick Height
Face brick sizes are listed in order of Bed Depth first, then Height, then Length, in accordance with the recommended practice of The Brick Industry Association. If customer does not specify that shapes are to be cored, solid or special cored, they will be furnished solid or cored at Manufacturer’s option.
